Before you invest in any fund, you should consider how the Fund would work with your other investments and your tolerance for risk.

This mutual fund is an alternative mutual fund. It is permitted to invest in asset classes or use investment strategies that are not permitted for other types of mutual funds. The specific strategies that differentiate this fund from other types of mutual funds may include: increased ability to sell securities short; the ability to borrow cash to use for investment purposes; and increased use of derivatives for hedging and non-hedging purposes. If undertaken, these strategies will be used in accordance with the Fund's objectives and strategies and, during certain market conditions, they may accelerate the pace at which your investment decreases in value. This mutual fund has received exemptive relief to permit it to engage in short selling and cash borrowing in excess of the limits permitted under applicable securities legislation for alternative mutual funds. Pursuant to this relief, and consistent with the Fund's investment objectives, the Fund may engage in the short selling of securities with a limit of 100% of its net asset value, may engage in cash borrowing with a limit of 100% of its net asset value and may engage in the short selling of securities and cash borrowing with a combined limit of 100% of its net asset value.

WHAT DOES THE FUND INVEST IN?

The Fund seeks to provide superior risk-adjusted return by investing primarily in securities of real estate investment issuers in developed markets globally. The Fund combines a market neutral long-short overlay with a concentrated long-only portfolio. The Fund intends to use leverage to enhance return primarily by short selling, cash borrowing and investing in derivatives.

The Fund's aggregate exposure is calculated as the sum of the following, and must not exceed 300% of its net asset value: (i) the aggregate market value of securities sold short; (ii) the value of indebtedness under any borrowing arrangements for investment purposes; and (iii) the aggregate notional value of the Fund's specified derivatives positions excluding any specified derivatives used for hedging purposes.

HOW RISKY IS IT?

The value of the Fund can go down as well as up. You could lose money.

One way to gauge risk is to look at how much a fund's returns change over time. This is called "volatility".
